Secrets and Lies: A History of CIA Mind Control and Germ Warfare by Gordon Thomas

Germ warfare? Secret mind control programs? New tell-all to be featured prominently in a National Geographic television special recounts the CIAs dirtiest deeds from insiders who have been there. In the late summer of 2001, prolific and best-selling British author Gordon Thomas received five CD-ROM disks, containing some 22,000 documents relating to secret CIA programs. None has been published...until now. In the shocking new release Secrets and Lies: A History of CIA Mind Control and Germ Warfare, author Thomas unleashes horrific accounts of the CIAs sick relationship with physicians and scientists whose aim it was to obtain control over the human mind and perfect the ultimate killing machine: germ microbes. Relying on sources that touch the very top echelon of the CIA, Thomas s methodical reporting concentrates on a triangle of men: Dr. Sidney Gottlieb, William Bill Buckley, and Frank Olson. Gottlieb, the former chief of the CIAs Technical Services Branch, organized an unprecedented system of medical torture using a team of like-minded staff doctors. Frank Olson was a former CIA scientist whose death sparked his son to find out who killed his father and why. And then there is Buckley, a long-serving CIA officer and an unparalleled source because of his position as a point man for the MK-ULTRA program and special assistant to Bill Casey, director of the CIA under President Ronald Reagan. Secrets and Lies lays out the facts about the CIA s massive stockpiling of biological weapons and tells the entire story of the CIAs mind control experiments, as seen largely through the eyes of Buckley, ending with his death at the hands of Hezhbollah.
